

30 years of breakthroughs

Leading the way in negative pressure wound therapy

Solventum™ V.A.C.® Therapy has helped treat over 10 million wounds – improving care for patients and healthcare professionals.

Transforming wound care with negative pressure

In 1995, **Solventum™ V.A.C.® Classic Therapy** revolutionized wound management by using controlled negative pressure to remove exudate, reduce edema and promote healing, establishing a new standard in wound care.

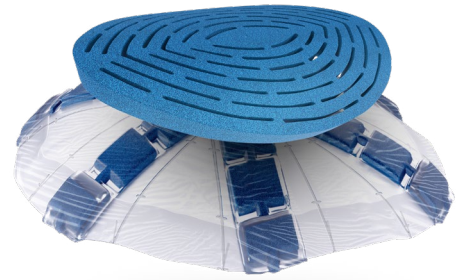

Enhancing control with smart technology

In 2007, the **Solventum™ INFOV.A.C.™ Negative Pressure Wound Therapy System** introduced a touchscreen interface and **Solventum™ SensaT.R.A.C.™ Technology** – giving clinicians real-time feedback and greater control over therapy settings to optimize wound healing.

Helping manage open abdominal wounds

In 2009, **Solventum™ AbThera™ Open Abdomen Negative Pressure Therapy** provided a new way to manage open abdominal wounds by actively removing fluid, reducing medial tension and helping protect internal organs – all while allowing rapid re-entry without the need for sutures.

Bringing remote monitoring to NPWT

In 2017, the **Solventum™ ActiV.A.C.™ Therapy System with iOn Progress™ Remote Therapy Monitoring** enabled U.S. clinicians to track NPWT progress remotely – offering greater convenience for clinics and enhanced portability for patients.

Combining negative pressure with wound cleansing

In 2011, **Solventum™ Veraflo™ Therapy** advanced NPWT by integrating automated instillation and dwell time, helping cleanse wounds of debris while promoting granulation and positive patient outcomes.

Protecting surgical incisions with negative pressure

In 2010, the **Solventum™ Prevena™ Therapy Incision Management System** helped improve post-surgical healing by maintaining a closed environment and removing exudate – helping to reduce the risk of negative post surgical outcomes.

Simplifying NPWT with a peel-and-place design

In 2024, the **Solventum™ V.A.C.® Peel and Place Dressing Kit** streamlined NPWT with simple, time-saving application (2-min average*) and up to seven days of wear – helping improve efficiency for clinicians and ease of use for patients.

2025 & beyond

For 30 years, we've innovated together to help manage wounds – and we're just getting started.
